Paper 4 Mechanics

October/November 2024

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

#### **INSTRUCTIONS**

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.
- Where a numerical value for the acceleration due to gravity (g) is needed, use  $10 \,\mathrm{m\,s^{-2}}$ .

#### **INFORMATION**

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has 16 pages. Any blank pages are indicated.

(a) Find the value of V.

 $v \, ({\rm m \, s^{-1}})$ 

3

The velocity of a particle moving in a straight line at time t seconds after leaving a fixed point O is  $v \, {\rm m} \, {\rm s}^{-1}$ . The diagram shows a velocity-time graph which models the motion of the particle from t=0 to t=T. The graph consists of four straight line segments. The particle accelerates from rest to a speed of  $V \, {\rm m} \, {\rm s}^{-1}$  over a period of 4 s, and then decelerates at  $\frac{5}{3} \, {\rm m} \, {\rm s}^{-2}$  to instantaneous rest over a period of 6 s. The particle then travels back towards O, reaching a maximum speed of  $3 \, {\rm m} \, {\rm s}^{-1}$  before coming to rest at time t=T.

(b)	Given that the total distance travelled by the particle from $t = 0$ to $t = T$ is 68 m, find the value of $T$ . [3]

[2]

against this resistance force is 50 J.

Find the speed of the block when it has moved 2 m down the plane.	[4]

P Q
45°

β°
0.2 kg
0.1 kg

The diagram shows two particles, A and B, of masses 0.2 kg and 0.1 kg respectively. The particles are suspended below a horizontal ceiling by two strings, AP and BQ, attached to fixed points P and Q on the ceiling. The particles are connected by a horizontal string, AB. Angle  $APQ = 45^{\circ}$  and  $BQP = \theta^{\circ}$ . Each string is light and inextensible. The particles are in equilibrium.

a)	Find the value of the tension in the string $AB$ .	[2]

<b>(b)</b> Find the value of $\theta$ and the tensi	on in the string $BQ$

Find the value of $\theta$ and the tension in the string $BQ$ .	[4]
	•••••

Two particles, P and Q, of masses  $2m \log$  and  $m \log$  respectively, are held at rest in the same vertical line. The heights of P and Q above horizontal ground are 1 m and 2 m respectively. P is projected vertically upwards with speed  $2 \text{ m s}^{-1}$ . At the same instant, Q is released from rest.

Find the speed of each particle immediately before they collide.

**(b)** It is given that immediately after the collision the downward speed of Q is  $3.5 \,\mathrm{m\,s^{-1}}$ .

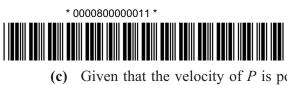

Find the speed of $P$ at the instant that it reaches the ground.	[5]
	••••••
	•••••••••••
	••••••

A particle, P, travels in a straight line, starting from a point O with velocity  $6 \,\mathrm{m\,s^{-1}}$ . The acceleration of P at time t s after leaving O is  $a\,\mathrm{m\,s^{-2}}$ , where

$$a = -1.5t^{\frac{1}{2}}$$
 for  $0 \le t \le 1$ ,

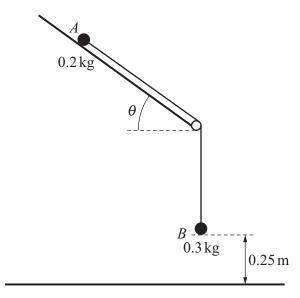

u 1.51	101 0 < t < 1
$a = 1.5t^{\frac{1}{2}} - 3t^{-\frac{1}{2}}$	for $t > 1$ .

a)	Find the velocity of $P$ at $t = 1$ .	[3]
b)	Given that there is no change in the velocity of $P$ when $t = 1$ , find an expression for $P$ for $t > 1$ .	or the velocity of [3]

Given that the velocity of $P$ is positive for $t \le 4$ , find the total distance travelled between $t = 0$ and $t = 4$ .

,

12

Two particles, A and B, of masses 0.2 kg and 0.3 kg respectively, are attached to the ends of a light inextensible string. The string passes over a small fixed smooth pulley which is attached to the bottom of a rough plane inclined at an angle  $\theta$  to the horizontal where  $\sin\theta=0.6$ . Particle A lies on the plane, and particle B hangs vertically below the pulley, 0.25 m above horizontal ground. The string between A and the pulley is parallel to a line of greatest slope of the plane (see diagram). The coefficient of friction between A and the plane is 1.125. Particle A is released from rest.

(a)	Find the tension in the string and the magnitude of the acceleration of the particles. [7]

* (	0000800000013 *
(b)	When <i>B</i> reaches the ground, it comes to rest.
	Find the total distance that A travels down the plane from when it is released until it comes to rest. You may assume that A does not reach the pulley. [4]
